RIT Security Awareness Training and Learning Management System

EMPOWERING THE FIRST LAYER OF DEFENSE,
ONE EMPLOYEE AT A TIME

Take a proactive approach with dark web, phishing, and education

Ransomware and loss of data is an epidemic, and email phishing scams continue to be the attack vector of choice for cybercriminals. However, technology alone *cannot* provide adequate security defense, as employees must be trained to avoid common security threats.

Recent security reports reveal that 95% of data breaches are caused by employee error. Without proper training to spot and avoid falling victim to phishing attempts, employees will continue to be the weakest link in an organization's security defense.

The Reliable IT Security Awareness Training helps transform the weakest link in a business, into their strongest line of defense!

Client Focused

RIT's Security Awareness Training is a robust security platform that protects our clients and their businesses by providing customized security awareness training, simulated phishing campaigns, detailed security policies, and thorough security risk assessments, all through a single client-branded portal.
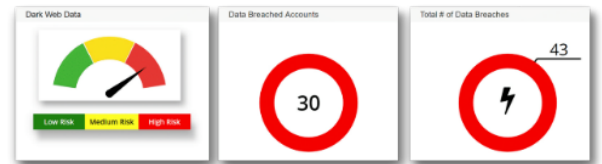

RIT Security Awareness Includes:

- **Security Awareness On-demand Training**
  40 minutes of videos and a 20 question quiz at the end
  Weekly micro videos and quizzes

- **Security and other Policy and Procedures**
  List of templates you can upload and edit independently

- **Acknowledgment of Policies**
  Track who has a knowledge of your policies

- **Risk Assessments**
  Questionnaires that will take you through a risk assessment

- **Phishing Campaigns**
  Track who responds

- **Dark Web Scan**
  Scan user email addresses to identity whose emails are on the dark web

- **Metrics Dashboard**
  View all user and company results on the dashboard
  (i.e. Who has completed training? What are their risk scores?)

Dark Web Breach Assessment (DWBA) & Security Training

Run a Dark Web Breach Assessment on your domain. This robust dark web breach assessment allows you to evaluate potential exposure and identify breached credentials on the dark web that may be putting your business at risk!

Perform an insightful phishing campaign to test employee security mindfulness, as well as roll out engaging security awareness training.

- *SHOW* your management that data breaches can happen to anyone – give examples of businesses JUST LIKE YOURS that have fallen victim to cybercrime

- *PROVE* security risk with a FREE Dark Web Breach Assessment and Phishing Campaign

- *CONVINCE* your management of the need for security awareness training to help protect your business from data theft

Dark Web Breach Assessments help partners show the security risks to an organization based on breached employee data.

RIT Security Awareness Training & Employee Vulnerability Assessment (EVA)

Make education continuous with our program. We provide invaluable client-branded services, such as weekly micro-trainings, informative security newsletters, simulated phishing campaigns, continuous DWBAs, and security risk assessments, all for one low monthly cost. Our revolutionary Employee Vulnerability Assessment (EVA), combines security metrics into an Employee Secure Score (ESS), so our clients can see which employees are their weakest links! By quickly determining an employee's ESS, we can confidently recommend security remediation services to help our clients strengthen their security posture, in addition to:

- Improving employee engagement by monitoring each individual's ESS,
- Increasing employee involvement through friendly competition via a leaderboard; and
- Testing employee retention and running simulated phishing campaigns.
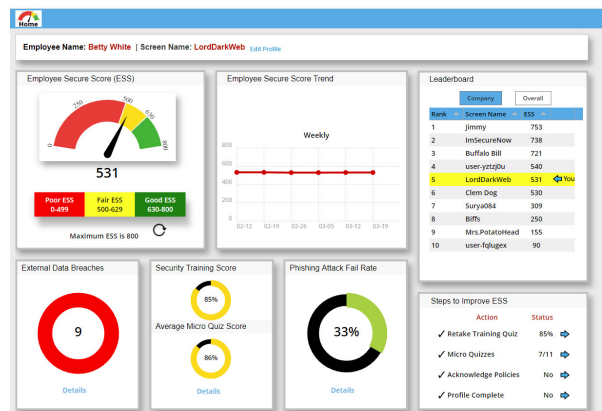

The Employee Vulnerability Assessment raises the bar when it comes to employee defense.
