RELIABLE IT BANKING

WE KNOW HOW IMPORTANT SECURITY IS TO YOUR BANK

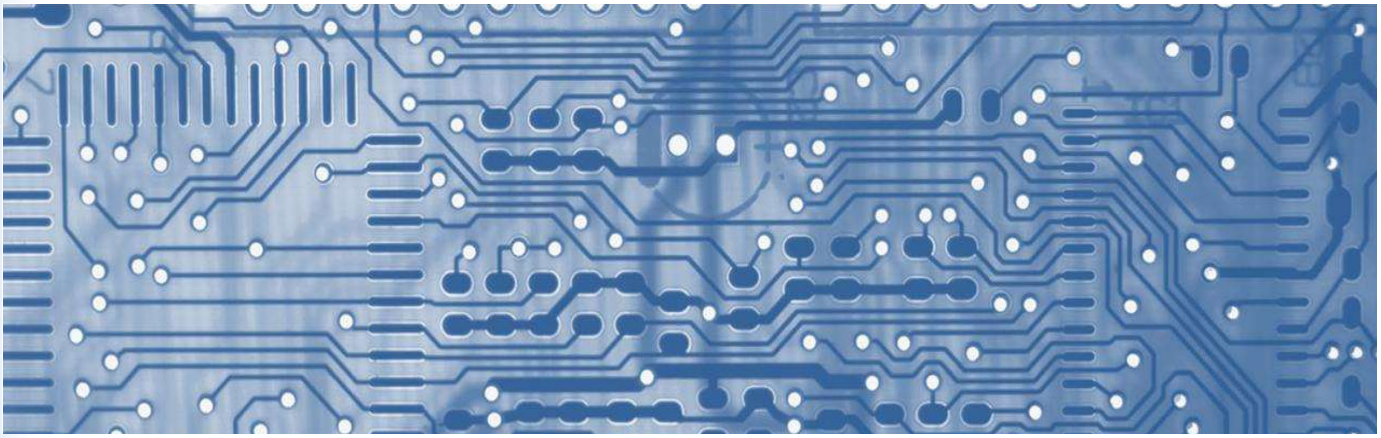
That's why we already have you covered with traditional security safeguards like firewalls, patching, anti-virus, and anti-malware. While necessary, these platforms target only a portion of your cyber security defense by protecting the perimeter of your network from external threats. **But did you know most experts find that 70% of all breaches and threats originate inside the network, leaving your bank vulnerable where you might least expect!**

A recent study from Accenture found that banks receive, on average, 85 serious attempted cyber-breaches every year. Of those, 36% were successful, meaning at least some information was obtained. On top of this, 59% of affected banks claimed it took “several months” to detect the breach.

Unfortunately, these threats to your bank occur far more often than you might think, through unintentional and unauthorized user access to computers, data, and programs on your network. Left unresolved, the cost to your banks could be disastrous in terms of downtime, appropriation of Intellectual Property (IP), theft of confidential information, hardware loss, reputation damage, and worse!

RELIABLE IT BANKING

In Verizon's Annual Report, Verizon cited insider threats as a "persistent problem" with 55 % of incidents tied to employees abusing their system access.



At Reliable IT Banking Division, we recognize the need to defend our clients from both external and internal threats. To provide the best protection, we have added a new, internal cyber security service to our portfolio, designed to uncover security threats occurring inside of your network. Behind this advanced service is an innovative cyber security appliance that works 24/7 using proprietary pattern recognition and mathematical modeling to identify anomalous user behavior, suspicious network changes, and threats caused by internal vulnerabilities and misconfigurations.
Here are some examples of what we can catch:

- Unauthorized wireless connections,
- A new user profile unexpectedly added to the Bank President's computer,
- An application just installed on a locked down system,
- User granted inappropriate admin credentials,
- Unusual after hours log-ins,
- Missing patches,
- Sensitive personal identification data stored on unauthorized systems, and
- Access to unauthorized file shares.

These are just a few of hundreds of risky events occurring inside of your network that we can guard against with our RIT Threat Detective appliance installed at your bank. The appliance provides actionable intelligence that protects your bank environment by alerting us to changes or threats caused by your staff, giving you critical time to act and working with you to create an action plan to mitigate the threat.

Starting at $600 per month, you can have peace of mind knowing that your bank is protected from internal vulnerabilities.
